

POWER BI PROJECT

IPL Cricket Performance Intelligence Dashboard

Match, team and player analytics across IPL seasons

Presented by Shivabalaji K R

Anudip DBA_AI | 01/10/2026

Agenda

01 Project overview

Goal, tools and scope

02 Data sources

CSV to XLSX, multiple files

03 New tables

Teams table from source files

04 Data model

Relationships and DimSeason

05 Report pages

Overview, Team Analysis, Player Stats

06 DAX

Measures used and why

07 Image URLs

Links pasted in Excel

08 UI and interactivity

Theme, slicers, bookmarks

Objective

To develop an interactive IPL Cricket Performance Intelligence Dashboard using Power BI, Excel, and DAX to transform multiple IPL datasets into meaningful insights on matches, team performance, player achievements, and season-wise championship statistics.

Tools and skills used

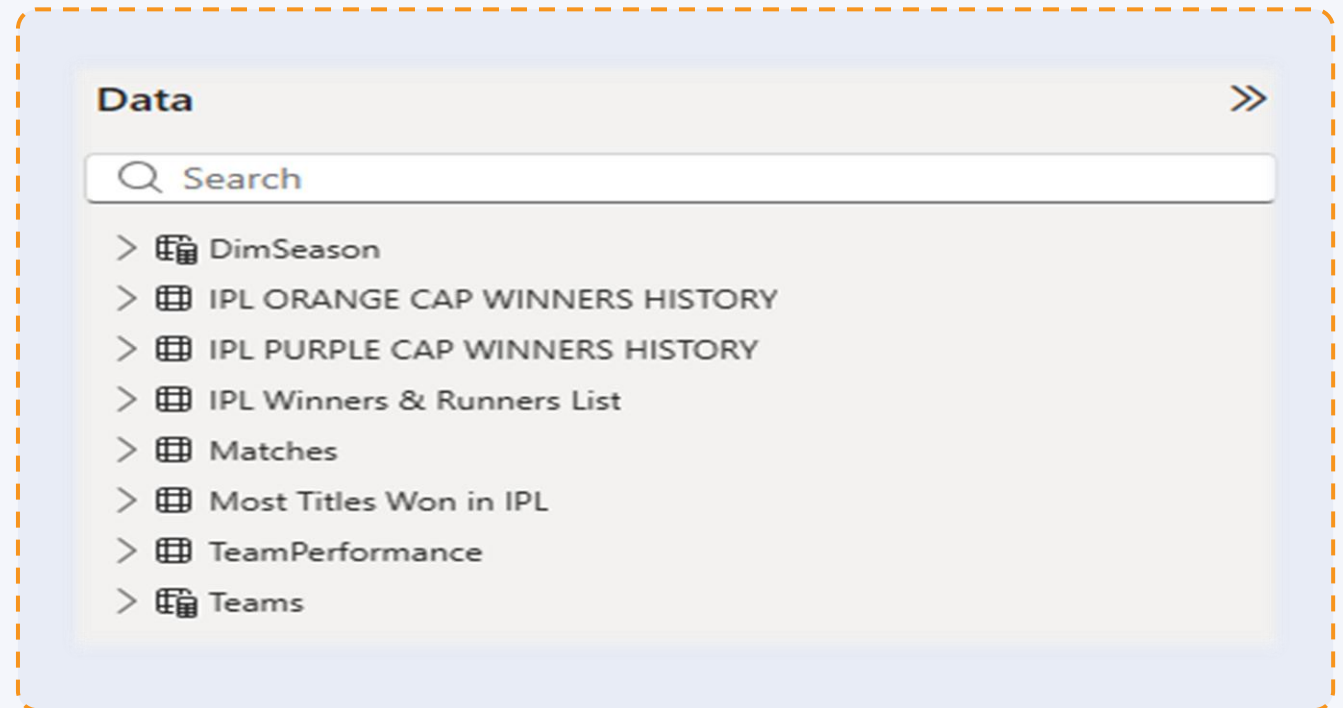

- Power BI Desktop: model, DAX, report design
- Excel: source data (CSV files converted to XLSX)
- DAX measures and new tables
- Adding image URLs

Data sources and preparation

Tables loaded

- Matches
- Teams (created from source files)
- TeamPerformance
- DimSeason
- IPL Winners & Runners List
- Most Titles Won in IPL
- IPL Orange Cap Winners History
- IPL Purple Cap Winners History

Creating new tables from source files

How it was built

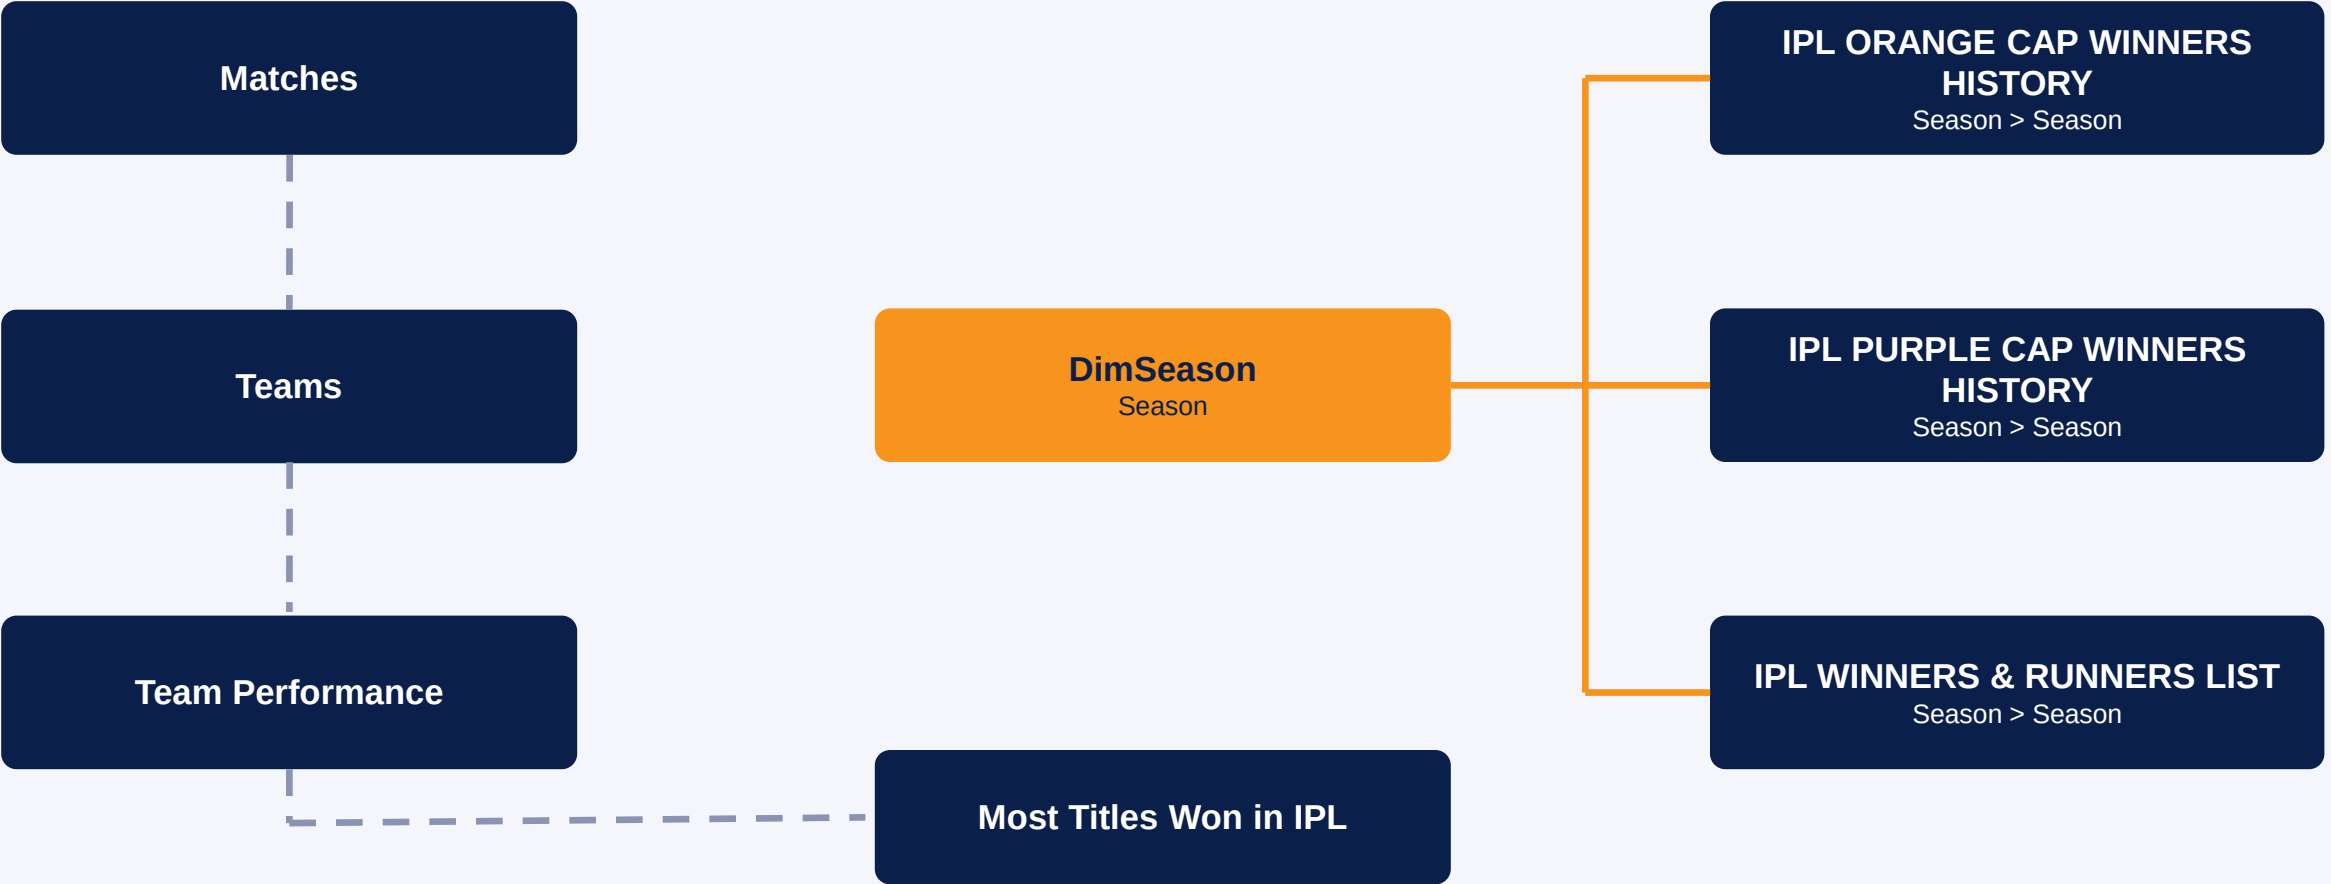

- Source files used: Matches records 2008 to 2026, Team wise home and away match results, Player performance and awards data sets
- Steps in Power Query / DAX: Cleaned and transformed source data, standardized team/season values, created relationships, and developed dynamic KPI measures using DAX.
- Columns created: Team, Short_Name, State, Home_City, Trophy_Winner
- Why: Created a standardized team reference list to support team filtering, state-based mapping, consistent naming, and dashboard analysis.

Teams table (Power Query / DAX)

```
1 Teams =  
2 DISTINCT(  
3     UNION(  
4         SELECTCOLUMNS(  
5             Matches,  
6             "Team", Matches[team1]  
7         ),  
8         SELECTCOLUMNS(  
9             Matches,  
10            "Team", Matches[team2]  
11        )  
12    )  
13 )
```

Data model view

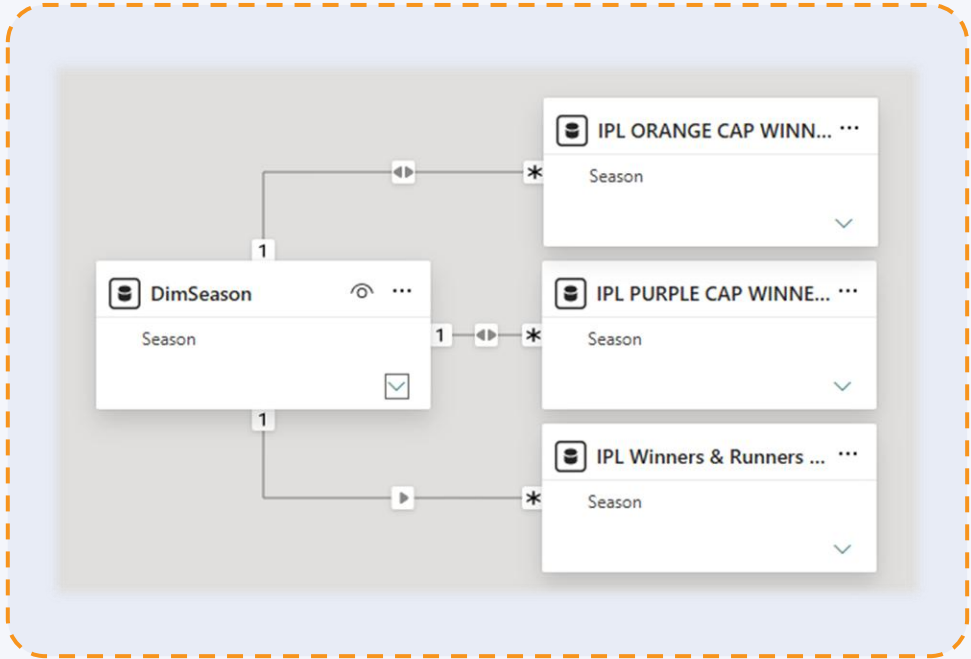

How the tables are connected

Relationships and the season slicer

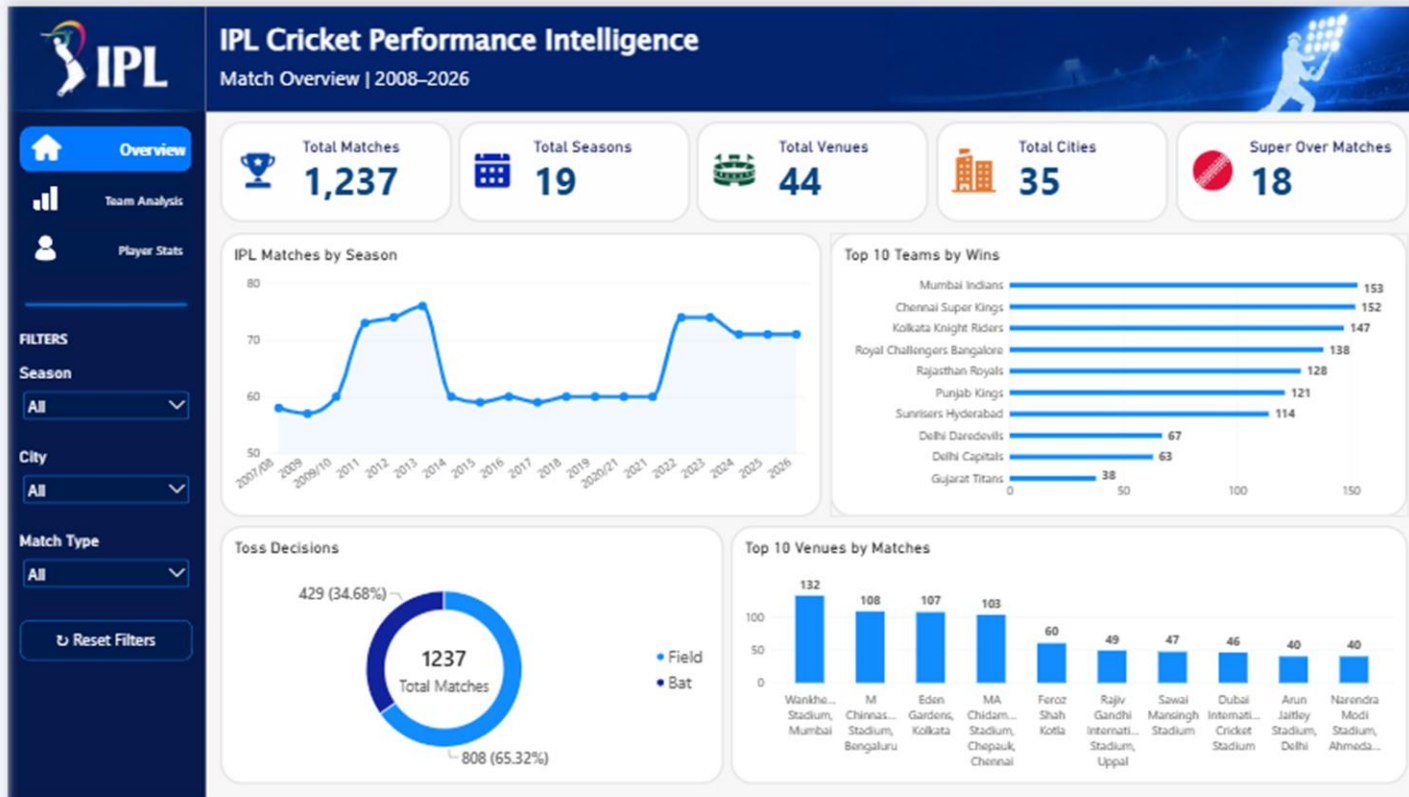

Linked in Model view, then used in slicers

From (many)	To (one)	Type	Filter direction
IPL ORANGE CAP WINNERS HISTORY[season]	DimSeason[Season]	Many to one	Single
IPL PURPLE CAP WINNERS HISTORY[season]	DimSeason[Season]	Many to one	Single
IPL Winners & Runners List[season]	DimSeason[Season]	Many to one	Single

Page 1: Overview

Matches at a glance

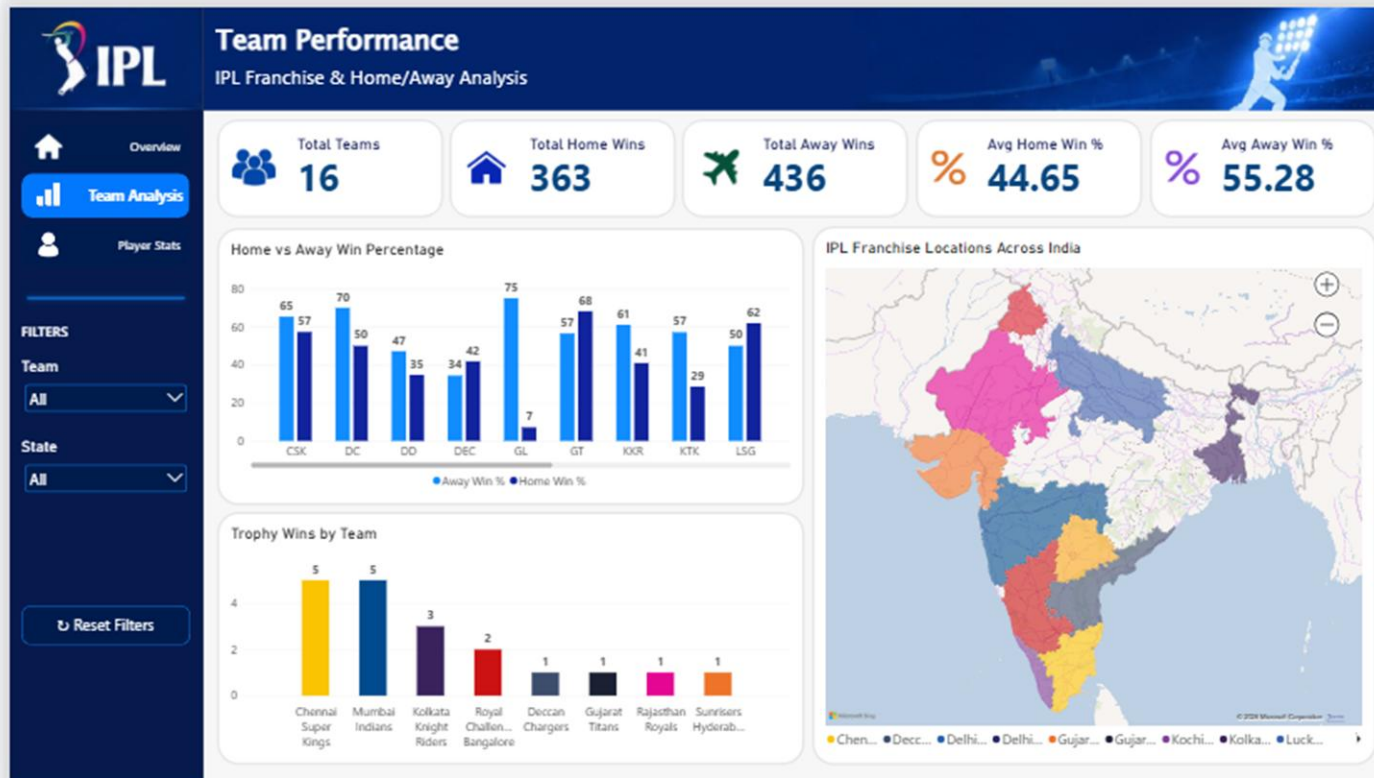

What is on this page

- KPI cards: Total Matches, Seasons, Venues, Cities, Super Over Matches
- Area chart: Matches by season
- Clustered bar: Teams by wins
- Donut: Toss decision
- Column chart: Matches by venue
- Slicers: Season, City, Match type
- Page navigator and Reset Filters button

Page 2: Team Analysis

Home vs away strength and trophies

What is on this page

- KPI cards: Total Teams, Home Wins, Away Wins, Avg Home Win %, Avg Away Win %
- Clustered column: Home vs Away Win % by team
- Column chart: trophy winners by team
- Filled map by state
- Slicers: season, team, state
- Reset Filters button

Page 3: Player Stats

Orange Cap, Purple Cap and finals by season

What is on this page

- Orange Cap panel: player, team, runs, average, strike rate, highest score
- Purple Cap panel: player, team, wickets, economy, average, matches
- Final panel: champion, runner, venue, winning cap
- Final Man of the Match and performance
- Player of Tournament and MVP team
- Season slicer drives every panel
- Player and team images load from URLs

DAX used in the project

Measures grouped by table

Matches

- Total Matches
- Total Seasons
- Total Venues
- Total Cities
- Super Over Matches
- Team Wins

Team Performance

- Total Teams
- Total Home Wins
- Total Away Wins
- Home Win %
- Away Win %
- Avg Home Win %
- Avg Away Win %

Player Stats

- Orange Cap: Player, Team, Runs, Average, Strike Rate, Highest Score
- Purple Cap: Player, Team, Wickets, Economy, Average, Matches
- Finals: Champion, Runner, Venue, Winning Captain, Man of the Match, Selected Season, MOM Performance
- Performance, Player of Tournament, Winner Team

DAX examples

Total Matches (Matches)

Total Matches = COUNT(Matches[id])

Home Win % (TeamPerformance)

Home Win % =
AVERAGE(TeamPerformance[home_win_percentage])

Champion (Winners & Runners)

Champion =
SELECTEDVALUE('IPL Winners & Runners List'[Winner])

Adding images through URLs

Links pasted in Excel and displayed in the report

FINAL MAN OF THE MATCH

Suresh Raina
Chennai Super Kings

IPL CHAMPIONSHIP 2010

Champion
Chennai Super Kings

Runner-up
Mumbai Indians

POT Winner URL	MOM Winner URL	Winner Team URL

UI and interactivity

Theme and canvas

IPL Navy and White, 1920 x 1080 pages

Branding

Header banner and logo images

Navigation

Left panel with page navigator

Slicers

Dropdown slicers for season, city, team, state

KPI cards

Key numbers at the top of each page along with icons

Reset buttons

Bookmarks that clear all filters

Key takeaways and next steps

What I learned

- Data modelling with a season dimension
- Writing DAX measures based on the data available and for suitable KPIs
- Combining multiple source files
- Designing a consistent UI
- Page duplication with applied filters, costs a huge time.

Next steps

- Host images online/drive
- Add upload option to load data for upcoming seasons.
- Adding the ball-by-ball data, to cherish Individual player analytics.
- Publish to Power BI Service

Thank you

SHIVABALAJI K R

Questions and feedback welcome
